

OPERATIONS AND PROJECT MANAGEMENT

Operations and Project Management Solutions

Project Collaborator is the engine that drives the most fundamental and critical business processes of any construction enterprise, the collaboration between workers in the field, their back office support and the project ownership. Project Collaborator maximizes the return on investment of any size or type of project by ensuring that critical project data is captured and recorded into a centralized database where it becomes available for use in both project and financial management.

- **Job Cost**
- **Equipment Accounting**
- **Equipment Maintenance**
- **Bill of Materials**
- **Order Processing**
- **Purchasing**
- **Time & Material Billing**
- **Service Management**
- **Plant Sales**
- **Scale Interface**
- **Material Requisition**
- **Mobile eCMS**
- **Human Resources Self Service**

Computer Guidance's operations and project management applications seamlessly integrate with all eCMS applications.

“Schedules, resources, job costs, change orders, contracts, project updates are seamlessly managed, documented and communicated among stakeholders with Computer Guidance's Project Collaborator solution.

Gray Farland, Director of Project Controls, Howard Shockey & Sons

Managing your projects successfully in today's construction workplace can be difficult, due to their diverse nature and complexity. Over 90% of construction projects will never reach completion on time or on budget. Productivity improvements, proactive measures and operational efficiencies are always of importance and value.

To successfully manage your complex field operations and the entire lifecycle of a project, contractors must rely on a single construction financial and project management solution.

Easy-to-use, integrated applications fully link all of your critical project information. For additional productivity gains, mission-

critical data can be conveniently accessed by high-level executives, field project managers, financial and accounting personnel.

Real-time communication of business-critical information across the entire organization is imperative from comprehensive initial planning to detailed management of project operations and financials.

With project collaboration, communication and controls in place, there will be no more delays in critical transactions or decision-making. One solution handles the communication, documentation, controls and facilitation of all projects—small or large, simple or complex.

“Since the implementation of Project Collaborator, we are experiencing improved communication and increased productivity across our entire organization. It makes a significant difference having a fully integrated, single database for all of our project management and financial solutions needs.

Darlene Moore, Executive Vice President, WIMCO Corp.
