

eCMS v.4.2 Cloud Construction ERP Software

eCMS v.4.2 Drives Efficiency, Maximizes Productivity and Accelerates Growth

In an increasingly competitive construction market, commercial contractors are accelerating adoption of technologies designed to grow market share, differentiate project delivery and “future-proof” businesses for what lies ahead. To achieve these objectives, commercial contractors are partnering with Computer Guidance Corporation (CGC), the construction industry’s leader in cloud computing, business automation and data analytics, to digitally transform their businesses.

Data is the lifeblood of business and the centerpiece of digital transformation. CGC’s cloud-based eCMS v.4.2 enables contractors to cost-effectively acquire the powerful computational resources required to collect and transform data into real-time contextual relevancy. The high availability and scalability of eCMS v.4.2 eliminates the maintenance costs associated with traditional ERPs, allowing contractors to focus on core business activities, meaning more projects delivered on time and under budget.

Becoming a data-driven organization is imperative in today’s high-paced world and essential to delivering projects on time for highly demanding customers. With eCMS every touchpoint, every click, every interaction is streamlined, resulting in maximum efficiency. Users from the field to the office become empowered through an intuitive user experience that turns them into highly informed, proactive decision-makers. That’s the digital difference delivered through eCMS enterprise-class construction management software for commercial contractors.

PRODUCT HIGHLIGHTS

- CGC’s cloud-based eCMS v.4.2 meets contractors’ unique needs and goals regardless of company or project size, scope and complexity
- Digital content, data and workflow transformation
- Construction-specific application suite
- Unparalleled BI and analytics
- Reliability, scalability and flexibility
- Single platform—office and field

“Users from the field to the office become empowered through an intuitive user experience that turns them into highly informed, proactive decision-makers.”
