COMPUTER GUIDANCE
CORPORATION

CONNECT THE FIELD AND OFFICE

"Like a building, a solid base for technology is key. eCMS v.4.2 from Computer Guidance offers this—along with a host of distinguishing features that make the product easy to use while providing the intelligence needed to keep a project on time and on budget."

—Peggy Smedley

eCMS v.4.2

Built on a solid foundation of decades of construction-specific enterprise-resource planning experience that has already revolutionized the productivity and efficiency of contractors across the country, the latest generation of eCMS v.4.2 from Computer Guidance Corp., continues to deliver a single-database solution that leverages cloud-based scalability and flexibility to meet unique contractor and customer needs. What makes this product so distinctive is its built-in BI (business intelligence) solution called IDI (interactive data inquiry), mobile, content management, and workflow, which makes digital transformation. This comes in addition to its advanced payroll and HR (human resources) functions supporting tax, payroll, government requirements, union and non-union labor, multi-state, multi-location, and multi-job.

The latest version brings a more advanced user interface using web-based tools and technologies, along with integrated applications, dynamic data mining and reporting, and content-management capabilities to connect the field and office. The result is a better timeline and budget—and ultimately a better project. During the COVID-19 pandemic, Computer Guidance enhanced the solution to support the management of COVID-related payroll and accounting requirements. Additionally, it enhanced its mobile capabilities for remote field employees with a notable eCMS Field browser-agnostic and device-independent user platform for mobile users and field operations. All in all, it continues to meet the needs of today's contractor.
